

# The future awaits...

Site of the new Veterinary Medicine Research Building (VMRB; ABOVE LEFT) prior to ground-breaking ceremonies (red arrow). The proposed building will house VCAPP and Neuroscience administration offices and research space. Biotechnology/Life Sciences (BLS) building spine (black arrow) is site where future VMRB will connect. (ABOVE RIGHT) Shared dock in front of VMRB construction site.

Aerial view front (MIDDLE PANEL L) and rear (MIDDLE PANEL R) of proposed VMRB site. (BOTTOM LEFT) Corner of existing BLS building conceals future VMRB site, beyond red arrow and existing trees. The VMRB will neighbor BLS on the south, coliseum parking to the north, Stadium Way (and WSU football stadium across street) to the west, and Food Science (housing *Ferdinand's*) to the rear. (ABOVE RIGHT) Rear/staging of south building site, looking back from Food Sciences/Human Nutrition building. The lonely front loader behind the tree seems to be waiting patiently to begin this exciting new project.

*Aerial views taken from 4<sup>th</sup> floor balcony of existing BLS complex*
